Dear Hiring Manager at SumUp,

I am writing to express my strong interest in the **Senior Data Engineer** position at SumUp. With over 14 years of experience architecting and optimizing large-scale data platforms, I have built a career around solving exactly the kind of scalability and performance challenges that a global fintech leader like SumUp handles daily.

In my most recent role at **NucleusTeq**, I architected self-service data platforms handling 10+ TB of daily workloads. My focus was on high-throughput performance engineering, where I successfully reduced Spark job execution times by **70-85%** through advanced shuffle optimization and resource tuning. I also spearheaded a zero-downtime, zero-data-loss migration of a multi-TB platform, ensuring absolute business continuity-a critical requirement for mission-critical financial systems.

My technical expertise aligns perfectly with your modern data stack, including **Apache Spark, Airflow, AWS EMR, and Snowflake**. Beyond just building pipelines, I am passionate about **Data Reliability and Observability**. I implemented frameworks that reduced production incidents by 40%, ensuring that data remains a trusted asset for decision-making.

I am particularly drawn to SumUp because of your commitment to empowering small businesses through seamless financial technology. I am eager to bring my expertise in cost-efficient, scalable architecture to your team in Berlin and contribute to the next generation of SumUp's data platform.

Thank you for your time and consideration. I look forward to the possibility of discussing how my background can support SumUp's growth.

Sincerely,

Venkatesh
